Specific comments to authors

The article is within the scope of the journal. The subject is interesting. The presentation is well written and organized. Likewise, it is easy to read. On the other hand, the results presented are important in the area of article knowledge, and represent an advance. This is a good article. Nonetheless, as stated in the discussion, it must be recognized that music therapy is only a psychological intervention, rather than a treatment for adverse reactions such as nausea and vomiting, and for patients receiving chemotherapy for moderately and highly emetogenic cancer, drugs should be given before chemotherapy to prevent serious gastrointestinal reactions. It is recommended to accept.

Specific comments to authors

The manuscript investigates the effect of music therapy on the relief of gastrointestinal adverse reactions in chemotherapy for patients with digestive tract cancer. The extensive analysis of the literature allows us to summarize the current status of the music therapy. This work was carried out with methodological rigor. Proper language with little need for polishing.
