

## Peer Review Report

### Reviewer #1

1. Due to scarcity of literature regarding these cases, I was unable to obtain literature regarding the association of papillary tumour as well as the number of ampullary biopsies with the development of pancreatitis.
2. Most of the literature recommends biopsying away from the pancreatic duct mouth. I have modified the same in my discussion quoting a study by Michopoulos et al.

### Reviewer #2

1. References have been provided for the introductory statements.
2. The patient's paraclinical results have been provided in tabular format.
3. The other causes of pancreatitis that we ruled out have been mentioned.
4. Studies not related to the manuscript have been omitted.
5. I have added further references to my manuscript bringing the total number of references to 9.
6. I have modified the language and am submitting a language editing certificate.
