

Thank you very much for your comments and for giving me this opportunity to revise my article, I will respond to the revisions.

1. Revision Comments:

Dysphagia has been classified as a “geriatric syndrome”. In this review, Zhang et al. summarized three categories of hallmarks (primary, antagonistic, and integrative) and functional decline of four stages. However, it remains unclear about what is the key or most important cause of dysphagia. The authors also have to introduce therapies against the key cause of this disease.

respond to the revisions:

Thank you for the suggested revision, I have added to the manuscript interventions that can be taken to deal with dysphagia that occur in the elderly.

2. This is a concise review of the topic. Manuscript is fairly well written.

Thank you for your comment

3. Thank you for recommending me as a reviewer. In this review article, the authors provided an overview of presbyopia, a long-neglected health problem. The authors emphasize the need to strengthen awareness and awareness of dysphagia in the elderly population and actively implement targeted interventions. Overall this review paper is well written.

Thank you for your comment
