

Specific Comments To Authors: I read with great interest the Manuscript titled “Bedside Ultrasound-guided Water Injection Assists Endoscopically Treatment in Esophageal Perforation Caused by Foreign Bodies: A case report”, which falls within the aim of World Journal of Gastrointestinal Surgery. In my honest opinion, the topic is interesting and the reported case novel enough to attract the readers’ attention. Nevertheless, the authors should clarify some points and improve the discussion citing relevant and novel key articles about the topic. Authors should consider the following recommendations: - Manuscript should be further revised by a native English speaker. - Does this manuscript conform the The CARE Guidelines: Consensus-based Clinical Case Reporting (CARE), available through Enhancing the Quality and Transparency Of health Research (EQUATOR) network guidelines? It would be mandatory to declare about this element. - I could not find any information regarding the informed consent of the patient. Did the authors obtain informed consent from the patients? Conversely, this point may raise serious concern from the ethical point of view. - Does the procedure require simultaneous cooperation between the ultrasound physician and the surgeon?

Answer:

Dear Editor,

We feel great thanks for your professional review work on our article. As you are concerned, there are several problems that need to be addressed. According to your nice suggestions, we have made some corrections to our previous draft, the detailed corrections are listed below.

As suggested by the reviewer, we have added more references to support this idea([6]、 [11]、 [12]).

We do invite a friend of us who is a native English speaker from the USA to help polish our article. And we hope the revised manuscript could be acceptable for you.

The manuscript conform the The CARE Guidelines: Consensus-based Clinical Case Reporting (CARE).

We have obtained the informed consent from the patients already.(Footnotes)

The procedure require simultaneous cooperation between the ultrasound physician and the gastroenterologist.(page 6)

Specific Comments To Authors: The author reported the case of bedside ultrasound-guided water injection assists endoscopically treatment in esophageal perforation caused by foreign bodies. The diagnosis and clinical courses are reasonably demonstrated and the conclusions showing the This method can be an optimal plan for treating patients with esophageal perforation caused by foreign bodies. It can effectively improve the efficiency of endoscopic removal efficiency of free foreign bodies in the neck, reducing

the surgical incision area and avoiding intraoperative bleeding and extensive tissue damage. Therefore, this report can be considered for the publication in this journal.

Answer:

Thank you very much!
