SPECIFIC COMMENTS TO AUTHORS

The authors presented a very interesting case of a patient with unresectable advanced gastric cancer. Sustained remission was carried out up to 17 months of observation of the patient after the second radical stage of the surgical operation (gastrectomy). The role of adjuvant therapy 17 years ago associated with breast cancer is discussed. The article is fully consistent with the theme of the journal WJGS. The manuscript is well illustrated with anatomical and morphological figures. I recommend publishing the manuscript in the World Journal of Gastroenterological Surgery.

SPECIFIC COMMENTS TO AUTHORS

In this, the authors reported a case of successful radical resection with completely laparoscopic subtotal gastrectomy after a modified stomach-partitioning gastrojejunostomy for obstruction relief, in a patient with gastric outlet obstruction. The authors performed a modified stomach-partitioning gastrojejunostomy, complete laparoscopic stomach-partitioning gastrojejunostomy combined with No. 4sb lymph node dissection, for obstruction relief. No recurrences were observed 17 months post-operatively. This case is rare and very interesting. The manuscript is very well written. Minor revision: 1. The words in the figures are too small, please change this. 2. The references list should be edited and updated. 3. Some minor language polishing should be revised.
