

## Response to Reviewers

Thank you for your careful review and pointing out errors for us to improve the manuscript.

*Reviewer #1,*

The research topic of this article is relatively new, the logic of the article is very good, based on this article has the following two problems, first, you can appropriately add more case pictures, the conclusion of the article is more convincing. Second, grammatical issues need to be rearranged. "AARS" itself is a relatively rare disease, and it is better to add more data.

→ Thank you for your attentive review.

1) An image with normal findings before surgery and a corrected image after surgery were added. Preoperative history before thyroidectomy were added in the case presentation.

History of present illness

A 12-year-old female patient visited our department with right torticollis and cervical motion limit two months ago.

History of past illness

The patient underwent thyroidectomy two months ago. The symptoms appeared after thyroidectomy.

Personal and family history

There was no significant past or family history.

Physical examination

There was no motor weakness or sensory change.

Laboratory examinations

There were no significant laboratory findings.

2) A language editing service was used to address grammatical issues, including errors in adverbs and conjunctions.

*Reviewer #2*

Specific Comments to Authors: Dear author, Please include more information about the treatment procedure. Please mention the outcome measures used for this case.

→ Thank you for your attentive review. An image with normal findings before surgery and a corrected image after surgery were added, and the appropriate information has been included in the case presentation to emphasize disease rarity.

Thank you for your consideration.

*Sincerely,*

Jung-Kil Lee, MD, PhD, Professor, Department of Neurosurgery, Chonnam National University Hospital & Medical School, 42, Jebong-ro, Dong-gu, Gwangju, 61469, South Korea.
