## SPECIFIC COMMENTS TO AUTHORS

This is a rare cases, but can occur as a complication of several risk factors. There are several important points I want to ask 1. Can you include laboratory findings related to the diagnosis? especially in acute diffuse peritonitis, septicemia, septic shock. 2. related to the cerebral infarction that occurs in the patient, is there any connection with the disease at the time of initial admission to the patient? 3. It is suggested that at the end of the discussion the cause of death of the patient may be added during treatment, to conclude its relationship to the case being discussed.

## SPECIFIC COMMENTS TO AUTHORS

This article is a case report on gallstone ileus, which is interesting, but there are many case reports of gallstone ileus, and the novelty is poor. Additional considerations regarding treatment methods are required. 1. The specific date should be deleted from the text. 2. The reason for the 22-day non-surgical follow-up after diagnosis should be described. 3. The reason why endoscopy was performed twice should be described in detail. 4. Was the patient's death due to surgical complications or bacteremia due to ileus? 5. Was a nasal long tube inserted into the patient? 6. The notation of figure in the text is difficult to understand. Shouldn't A, B, etc. be added to the notation? 7. Is fistula closure necessary for surgery in this patient? Considering her age, wouldn't jejunotomy and stone removal be sufficient?
