

## **Answering Reviewers**

**Name of Journal:** *World Journal of Clinical Cases*

**Thank you for your peer review report. We have read the report you sent us in depth, and we tried our best to reflect it in our manuscript according to the comments.**

**Fisrt, we have revised the case presentation section according to the guidelines and requirements for manuscript revision, dividing it into the following sections: Chief Complaint, History of Present Illness, History of Past Illness, Personal and Family History, Physical Examination, Laboratory Examinations, and Imaging Examinations.**

**And here's a list of corrections to the points you sent point by point.**

Reviewer #1:

Scientific Quality: Grade C (Good)

Language Quality: Grade B (Minor language polishing)

Conclusion: Accept (General priority)

Specific Comments to Authors: This paper reports a case which is the first instance of repetitive transcranial magnetic stimulation being applied to a stroke patient during pregnancy. However the case was not ethically approved before treatment. I suggest it is up to the editorial office whether it can be published. good.

**-> Thank you for your sincere comment.**

**We have completed the English editing by requesting the American Journal Experts(AJE) service you mentioned. And we have attached the English Editing Certificate.**

**What you pointed out was ethically disapproved, informed consent was obtained from patients and their families prior to the treatment. And ethical approval was obtained from the Institutional Review Board (IRB) of Chungbuk National University Hospital (IRB number: 2023-03-036). IRB approval notice is attached.**

Reviewer #2:

Scientific Quality: Grade C (Good)

Language Quality: Grade B (Minor language polishing)

Conclusion: Major revision

Specific Comments to Authors: 1. what other treatment other than rTMS has the patient received during rehabilitation stage? 2. the imaging of patients after completing rTMS therapy could be added. 3. has the authors have the video of patients at the onset and rehabilitation stage of stroke, to directly shown the changes of motor function.

**-> Thank you for your sincere comment.**

**1. In addition to repetitive transcranial magnetic stimulation (rTMS), the patient received medical treatment and conventional physical therapy. It was supplemented in detail in the treatment of the manuscript.(line 11-17, page 7)**

**2. By adding figure2, we made it possible to check the image of the patient's improvement after treatment.(line 1, page 8)**

**3. No videos or video data were taken at the time of the patient's initial evaluation, but a video of the patient's cane gait is attached after treatment. Please check the attached video and decide if it will be an appropriate content.**
