**SPECIFIC COMMENTS TO AUTHORS**

POEM has been used clinically since 2010, and a large number of studies have shown that POEM is a safe and effective method for adult achalasia. However, there are limited data on POEM in pediatric patients. Therefore, there is an urgent need to find an effective treatment to relieve the symptoms of achalasia in children. In this clinical study, the authors used a retrospective cohort study to evaluate the safety and long-term efficacy of POEM in pediatric achalasia patients after long-term follow-up of patients with achalasia to evaluate surgery-related parameters, adverse events, clinical success rate, gastroesophageal reflux disease after POEM and quality of life. For children, POEM is a less invasive treatment with good results. The results of this study indicate that POEM is a safe and effective method for the treatment of achalasia in children, which can significantly relieve symptoms and improve the quality of life of children. The manuscript is well, concisely and coherently organized and presented. The style, language and grammar are accurate and appropriate. The figures and tables help the readers to make a more understanding of the study; however, some concerns have been noted including: 1. The format of references should be modified. 2. Abbreviations

appearing in all articles need to be fully explained, for example, the full name of NPO is not seen. 3. On page 5, the principle of matching pediatric patients with control patients is also performed endoscopist, which should be performed endoscopy.

**SPECIFIC COMMENTS TO AUTHORS**

The manuscript is a retrospective cohort study, the author prepared the manuscript according to the appropriate research methods and reporting. The manuscript meets the requirements of ethics and biostatistics. The manuscript adequately describes the background, present status and significance of the study. The manuscript describes methods in adequate detail. The research objectives achieved by the experiments are used in this study. They included 48 pediatric patients and 1025 adult patients with achalasia and patients had a median 5.7 years followed-up. The manuscript interprets the findings adequately and appropriately, highlighting the key points concisely, clearly and logically. The findings and their relevance to the literature are stated in a clear and definite manner. The risk of complications relating to POEM was not increased in pediatric patients, and the long-term efficacy of POEM was demonstrated by the Eckardt score and the Urbach questionnaire. The discussion is accurate and it discuss the paper’s scientific significance and relevance to clinical practice sufficiently. The figures and tables are sufficient, good quality and appropriately illustrative of the paper contents. figures require labeling with arrows, asterisks etc., are better legends.
