SPECIFIC COMMENTS TO AUTHORS

So far, few reports have shown the impact of MDT meetings on synchronous colorectal liver metastases. In this retrospective study, Li Hao et al, analyzed the impact of MDT meetings on the clinical data of patients with synchronous colorectal liver metastases and shared their opinion on management of synchronous colorectal liver metastases in an MDT model. This provides guidance and a basis for future clinical practice. It’s a very interesting study. And the article is sufficiently novel and very interesting to warrant publication. The Results are presented clearly and have been discussed well. Editing and proofreading are needed to maintain the best sense of reading. In addition, the abbreviations in the table shall be marked with the full name.

SPECIFIC COMMENTS TO AUTHORS

Thank you very much for asking me to review this manuscript by Li Hao et al. This is the retrospective study to investigate the effects of multidisciplinary teams on patients with synchronous colorectal liver metastases. Accordingly, 262 patients with synchronous colorectal liver metastases in their hospital between Feb 2014 to Feb 2017 were enrolled. The benefit of neo-adjuvant therapy was discussed. This is a concise and thorough study, which would add value to the current established knowledge and evidence. Authors also share their opinion on management of synchronous colorectal liver metastases: They thought MDT management did bring patients with synchronous colorectal liver metastases more opportunities for comprehensive examination and treatment with better outcomes. I recommend that the manuscript can be published after a minor editing, conclusions need to be expressed more concise and clearer.
