SPECIFIC COMMENTS TO AUTHORS

In a post-COVID19 era where there is significant interest in MPX, this case report provides us with valuable information. While MPX is commonly known to manifest as a dermatological condition, the fact that it can present as proctitis or progress to an anal mass is intriguing. It would have been helpful from the colonoscopist's perspective to have sigmoidoscopy findings or histological examination results, but unfortunately, they were not performed due to the patient's condition. Thank you for sharing this fascinating paper

SPECIFIC COMMENTS TO AUTHORS

This manuscript was a rare case with both with Monkeypox and HIV/AIDS with MSM. However, endoscopic appearance and pathological examination of rectal mass were not presented. Major comments: It is important to describe the pathophysiological of rectal mass. Some cases with HIV infection shows GI tract mass such as Caposi's sarcoma or lymphoma. Tissue swab for MPX DNA PCR was positive in the results. Which tissue swab was positive for MPX? Is it possible for the author to present another image information?

SPECIFIC COMMENTS TO AUTHORS

well written a case report on monkeypox virus. Did the authors evaluate the other sexual transmitted disease on this case? Such as HPV, and Chlamydia
