**SPECIFIC COMMENTS TO AUTHORS**

This manuscript reviewed the role of diet as an epigenetic factor in inflammatory bowel disease (IBD). The author has provided an extensive discussion on several aspects, such as the role of epigenetics, nutritional Aspects and the nutri-epigenetic modulator in the pathogenesis of IBD. This is an interesting review. However, I still have several questions and suggestions listed below. Please make an answer or revision. 1. This article mainly mentions the role of a certain nutrient in IBD. I suggested the authors should also discuss which specific foods (fruits, vegetables, or certain plants) are most likely to affect IBD through epigenetic means. 2. Please present the main results of the review in a tabular format, including information on the type of nutrient, the type of epigenetic pathway, the main conclusion, and the authors. 3. The author should provide a more detailed description of how diet affects the occurrence and development of IBD. 4. The mechanism by which nutrients affect IBD through epigenetics should be described more clearly in the paper. According to the above, I suggest the authors should answer the questions and make a revision.

**SPECIFIC COMMENTS TO AUTHORS**

The manuscript showed the significance of diet and epigenetics in IBD, however, the authors failed to provide a concluding concept/context. The manuscript requires some grammatical rephrasing of sentences; authors need to prove read and make necessary corrections-particularly the abstract is scanty and lack complete and significant statement/information about the manuscript.
