SPECIFIC COMMENTS TO AUTHORS

The manuscript entitled " Impact of emergency department nursing intervention on continuity of care, self-care and psychological symptoms" is well designed and written. The introduction gives a good overview about the topic and the procedures are precisely described. The results were well discussed. However, some issues have to be addressed:

1. The tables are relevant and informative. However, it is suggested that the correlation between each table should be analyzed and discussed more clearly.
2. Editing and proofreading are needed to maintain the best sense of reading.
