

Specific Comments to Authors: Comprehensive well written All aspects covered Anatomy, reconstruction, techniques and methods of reconstruction have been covered well good number of references Few comments

Section 3.5 Suggest renaming Oval tunnel instead of elliptical tunnel The description has been given in detail in the reference provided Knee. 2016 Jan;23(1):91-6. doi: 10.1016/j.knee.2015.07.005. Epub 2015 Aug 7. Technique of anatomical single bundle ACL reconstruction with rounded rectangle femoral dilator Junsuke Nakase 1, Tatsuhiro Toratani 2, Masahiro Kosaka 2, Yoshinori Ohashi 2, Hitoaki Numata 2, Takeshi Oshima 2, Yasushi Takata 2, Hiroyuki Tsuchiya 2 Affiliations expand PMID: 26260242 DOI: 10.1016/j.knee.2015.07.005

Section 5.1 To be renamed – screw fixing to change to aperture fixation. Would be very helpful to add some figures or xrays under each technique to make the techniques and concepts clear.

Please include the reference Cochrane Database Syst Rev. 2018; 2018(6): CD010730. Published online 2018 Jun 29. doi: 10.1002/14651858.CD010730.pub2

Overall very good and well written It would be worthwhile including a few lines under each sub section - pros and cons of each technique and also add figures to make it complete

Answering Reviewers:

Dear reviewer:

Thank you for your decision and constructive comments on my manuscript. The yellow part that has been revised according to your comments. Revision notes, point-to-point, are given as follows:

1. Section 3.5 has been modified
2. the reference Cochrane Database Syst Rev. 2018; 2018(6): CD010730. Published online 2018 Jun 29. doi: 10.1002/14651858.CD010730.pub2 has been included
3. Section 5.1 has been modified
4. A technical diagram has been added
5. Two tables have been added to describe the technical advantages and disadvantages
6. The modified location is **marked**
