SPECIFIC COMMENTS TO AUTHORS

Overall Review: This paper presents a systematic analysis of the literature and ongoing clinical trials related to immunotherapy for gastric cancer. The authors used scientometric analysis to analyze the relevant literature and identified emerging trends and key focus areas in the field of gastric cancer immunotherapy. The paper provides valuable insights into the current progress and future development trends in this field, as well as scientific research recommendations for researchers. 1. Can you provide more details about the specific methodologies used in the scientometric analysis? How were the literature and clinical trial data collected and analyzed? 2. What were the main findings of the scientometric analysis? Were there any notable trends or patterns identified in the literature and clinical trial data? 3. Can you explain the significance of the identified clusters and keywords, such as TME, MSI, DC, and ACT, in the context of gastric cancer immunotherapy? 4. How do the findings of this analysis contribute to the current understanding of gastric cancer immunotherapy? Are there any novel insights or recommendations for future research? 5. Can you provide more information about the ongoing clinical trials in the field of gastric cancer immunotherapy? What are the specific

interventions and endpoints being studied? 6. Are there any limitations or challenges in the current research on gastric cancer immunotherapy that need to be addressed? How can these limitations be overcome in future studies? 7. How do the findings of this analysis align with the existing literature and current clinical practice in the field of gastric cancer immunotherapy? 8. Are there any specific recommendations or implications for clinical practice or policy development based on the findings of this analysis?

SPECIFIC COMMENTS TO AUTHORS

My comments to Authors: This review includes a literature search on immunotherapy for gastric cancer from 1999 to 2023, along with an analysis of research trends using scientometric methods. While the discussion section elaborates on the specifics of immunotherapy, the primary focus of this study lies in tracking research trends. I believe that delving into the intricacies of immunotherapy would have added considerably to the content, potentially making it difficult for readers to grasp the intent of the study. It is my suggestion that the information could have been presented more succinctly for the reader's understanding. Overall, this review article is well written, and I have noted a few minor comments below: Introduction 1. The abstract states that gastric cancer has the fourth highest cancer mortality rate, while the introduction states that it is the third highest, which is inconsistent. Results 1. In Section 3.1.2, percentages should be reported to the first decimal place. Reference 1. Reference 19: J. Clin. Oncol. 2023, 41,1471-+ should be corrected to J. Clin. Oncol. 2023, 41,1470-1491.
