SPECIFIC COMMENTS TO AUTHORS

The authors the Impact of gender on the outcomes of deceased donor liver transplantation. The comparisons were not restricted to long-term outcomes, but indications, graft characteristics and postoperative complications also. This is a large cohort from a huge database. The results section are figures and didatic. The discussion section is updated and concise. The conclusions can impact mainly in claryfing clinicians that postoperative management and follow up of LT patients should be in a individual basis, considering gender variables. English polite is needed.
