SPECIFIC COMMENTS TO AUTHORS

This is a very well-written, thouroughly documented clinical case study. Its subject is of interest to clinicians dealing with immunosuppressed patients worldwide, and will also be useful for those who assess infections by Nocardia in nonimmunosuppressed subjects. I have no queries concerning title, introduction, results, discussion, references or figures. All of the findings are clearly described, and the management of this patient was very rational and respectful of the patient's own concerns. The authors are to be commended for an excellent piece of work.
