

Reviewer #1:

Scientific Quality: Grade B (Very good)

Language Quality: Grade A (Priority publishing)

Conclusion: Accept (General priority)

Specific Comments to Authors: The authors' innovative concept of pan-lymphatic dysfunction and suggest Crohn's disease as an intestinal manifestation of pan-lymphatic dysfunction with preliminary data is a new concept. Although this concept may bring new perspectives in both clinical research and clinical management in a quite speculative fashion at this time.

Reviewer #2:

Scientific Quality: Grade C (Good)

Language Quality: Grade B (Minor language polishing)

Conclusion: Accept (General priority)

Specific Comments to Authors: The review comes across as fluent and interesting. The table is illustrative and the figures are suitable to explain the pathogenetic patterns expressed. The animal model in which to examine this pathogenetic hypothesis of Crohn's disease is interesting.
