

Reviewer #1:

*Scientific Quality: Grade C (Good)*

*Language Quality: Grade B (Minor language polishing)*

*Conclusion: Minor revision*

*Specific Comments to Authors: In this study, the authors evaluated the efficacy and safety of naproxat mesylate in patients with end-stage renal failure. The results show that the post-treatment prothrombin time, activated partial thromboplastin time, thrombin time, and International Normalized Ratio values in the control group were higher than those in the observation group, while the fibrinogen level in the control group was lower than that in the observation group. Minor comments:*

*1. The manuscript should be edited. Some minor language polishing should be revised.*

Answer: We thank the Reviewer for his/her kind evaluation of our work. We are sorry for the mistakes. It has been corrected and marked in red. Thanks again!

*2. Please move the tables to the end of the manuscript.*

Answer: We thank the Reviewer for his/her kind evaluation of our work. We are sorry for the

mistakes.It has been corrected and mark it in red. Thanks again!

*3. Please update the references with PMID and Doi numbers*
