

PEER-REVIEW REPORT

Name of journal: *World Journal of Clinical Cases*

Manuscript NO: 88735

Title: Hemichorea in patients with temporal lobe infarcts: Two case reports

Provenance and peer review: Unsolicited manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 04480772

Position: Peer Reviewer

Academic degree: N/A

Professional title: N/A

Reviewer's Country/Territory: France

Author's Country/Territory: China

Manuscript submission date: 2023-10-11

Reviewer chosen by: Yu-Lu Chen

Reviewer accepted review: 2023-11-15 11:22

Reviewer performed review: 2023-11-19 22:49

Review time: 4 Days and 11 Hours

Peer-reviewer statements	Peer-Review: <input checked="" type="checkbox"/> Anonymous <input type="checkbox"/> Onymous
	Conflicts-of-Interest: <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

SPECIFIC COMMENTS TO AUTHORS

The authors provided two cases reports about a specific neurologic sign (hemichorea) in patients with stroke in the temporal lobe. It engage data about fibers tract disruption and highlight potential stroke if hemichorea appears suddenly. The two cases are clearly described. in bibliography, did you found this reference : Tater P, Pandey S. Post-stroke Movement Disorders: Clinical Spectrum, Pathogenesis, and Management. Neurol India 2021;69:272-83 in title : you could remove the first "two" in the title the case presentation are clear, but it could be difficult to understand well with the alternated presentation. in figure 1 : it seems that the left vertebral artery is not visible in figure D, a narrow should be useful to see the stenosis
