## SPECIFIC COMMENTS TO AUTHORS

Thank you for sharing the case. Some questions and remarks: 1- In introduction give the former nomenclature of IMT in paranthesis. 2- Indicate that the tumor is benign OR borderline, mention the prognosis. 3- Mention the expanded differential diagnosis of the case other than written. Also initially how the tumor is recognised? If incidentally how? 4- "The final pathologic diagnosis was inflammatory myofibroblastic tumor" is not enough. Write the pathognomic pathologic description from the pathology report. 5- Was the tumor positive for ALK1 IHC? 6- Share at least two histological pictures of this case obtained from the Pathology department. 7- "During physical examination, the patient had no apparent symptoms" Symptoms should be "sign" A symptom is a manifestation of disease apparent to the patient herself, while a sign is a manifestation of disease that the physician perceives.
