SPECIFIC COMMENTS TO AUTHORS

Authors reported an interesting case, but major revisions are needed before publication. English should be improved. It is important to report more details about radiological evaluations (acetabular anteversion, angles referred to the femur, Crowe classification and describe them). I also suggest to move the tecnique description to the treatment paragraph and this one should be titled " surgical technique". Please, add more details about limits and complications of the method, such as the risk of dislocation, or avascular necrosis. Discussion paragraph should be improved. Please, also add more recent references.
