

PEER-REVIEW REPORT

Name of journal: *World Journal of Gastrointestinal Surgery*

Manuscript NO: 90047

Title: Computer-assisted three-dimensional individualized extreme liver resection for hepatoblastoma in proximity to the major liver vasculature

Provenance and peer review: Unsolicited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 06316516

Position: Peer Reviewer

Academic degree: MD

Professional title: Doctor

Reviewer's Country/Territory: Türkiye

Author's Country/Territory: China

Manuscript submission date: 2023-11-21

Reviewer chosen by: Huo Liu

Reviewer accepted review: 2024-01-10 06:06

SPECIFIC COMMENTS TO AUTHORS

I want to congratulate the authors for this important research. The title “Computer-assisted three-dimensional individualized extreme liver resection for hepatoblastoma in proximity to major liver vasculature” reflects the main subject of the manuscript. The abstract well summarizes and reflect the work described in the manuscript. Keywords reflect the focus of the manuscript. The manuscript adequately describes the background, present status, and significance of the study. Methods section is in adequate detail. The results stated that extreme liver resection for HB that is still in close PMV after a full course of NAC is both safe and feasible and this finding will bring a new perspective and hope for future studies. The discussion section is well-written and notifies the paper’s scientific significance. The manuscript is well, concisely, and coherently organized and presented, and no objections to the statistical analysis, tables, and references. The manuscript also meets the requirements of ethics. This research supports the idea that extreme liver resection for HB which is still in close PMV after a full course of NAC is both safe and feasible. This approach may reduce the necessity for liver transplantation. But the prognosis issue needs a way to go.
