

Dear Reviewers and editors:

We wish to thank you for the time and effort you have spent reviewing our paper. We are pleased to note that reviewer has found our research work interesting. The article has been improved through the integration of supplementary content. Our responses to comments of the reviewer are as follows.

Yours sincerely,

Prof. Si-yu Sun

Manuscript number: 90491

Title: Muscle strength and non-alcoholic fatty liver disease/metabolic-associated fatty liver disease

Reviewer Comments

Reviewer #1:

Scientific Quality: Grade A (Excellent)

Language Quality: Grade A (Priority publishing)

Conclusion: Accept (General priority)

Specific Comments to Authors: Dear Authors, identifying risk factors and patient stratification according to them is very important, especially in terms of such prevalent conditions such as MAFLD. Hand-grip test is a suitable method of estimating someone's muscle strength and of good quality for estimating different health-related outcomes. It is also easily accessible in the population and easily available tool. I suggest the publication.

Response:

Thank you for dedicating your valuable time to reviewing our paper and thanks for your suggestion. The article has been enhanced with additional content to enhance its quality.
