SPECIFIC COMMENTS TO AUTHORS

This article reports a case of perforation caused by small intestinal vascular leiomyoma, a rare condition. The diagnosis is probably correct, and the report is clinically valuable. However, the description of the histopathologic findings is inadequate. More detailed information on this important point would be beneficial. To improve the comprehensibility of the article, it would have been beneficial to focus on the histopathological findings and provide a clear description of the characteristics of the lesions and histological features. Additionally, including gross photographs of cut-surface of the tumor, if possible, would enhance the reader's visual understanding and improve the quality of the paper. Please consider these suggestions.

SPECIFIC COMMENTS TO AUTHORS

Figure 3a shows that the tumor is predominantly located outside the small bowel wall. It is possible that this location of the lesion was important in the pathologic process in this case, and it is inappropriate to describe it as a submucosal tumor. I think the lesion should be explained to be an extramural tumor.
