SPECIFIC COMMENTS TO AUTHORS

I read with great interest the Manuscript titled " Research progress on venous thrombosis development in patients with malignant tumors.", topic interesting enough to attract readers' attention. Although the manuscript can be considered already of good quality, I would suggest following recommendations: - I suggest a round of language revision, in order to correct few typos and improve readability. - I suggest reading and add recent evidences about the importance of adequate management in patients with malignant tumors, also with gynecological cancer, with the aim to improve prognosis and the possibility of tailored management considering results of this study. - I suggest that authors to add a reference about importance of a correct and complete evaluation of patients with cancer, considering various comorbidity, older age and the possible application of the comorbidity index to predict survival. I would be glad if the authors discuss this important point. Because of these reasons, the article should be revised and completed. Considering all these points, I think it could be of interest to the readers and, in my opinion, it deserves the priority to be published after minor revisions.
