COMMENTS TO AUTHORS

In this editorial, Compeán et al. discussed the reasons why hepatogenous diabetes is a neglected condition. The authors described a hot topic in this field and well summarized a lot of papers. The manuscript is going to be improved by revision of following points. Major comments 1. The reasons why hepatogenous diabetes is a neglected condition is a main topic of this editorial. Authors should be summarized the reasons by a scheme or table in order to understand easily. 2. It is important that diabetes mellitus is associated with the development of hepatocellular carcinoma and prognosis of patients. This issue have to be emphasized by citing following papers (Oncol Rep. 2007;18:545-52., PLoS One. 2014;9:e95485.). 3. Hepatitis C virus causes insulin resistance. Etiological difference in insulin resistance/diabetes mellitus should be stated by referring following papers (Am J Pathol. 2004;165:1499-508., Am J Gastroenterol. 2007;102:570-6., World J Gastroenterol. 2015;21:12361-9.). 4. Use of anti-diabetic agent and hepatocarcinogenesis is an important clinical issue. An a ssociation of exogenous insulin or sulphonylurea treatment with an increased incidence of hepatoma should be discussed. In addition, one would be interested in an impact of DPP-4 inhibitor, which is the most frequently prescribed in diabetic patients with chronic liver disease (Liver Int. 2010;30:479-86., Ann

COMMENTS TO AUTHORS

In this review, the author provided an overview of the current evidence-based information on hepatogenous diabetes in chronic liver diseases. The author discussed the reasons why we think that hepatogenous diabetes may be a neglected condition and the necessity for more clinical research on different aspects of this disease. This review is described in detail, which, as a valuable information, could help the readers that have better understand the first-hand knowledge of this topic to start novel studies. This review is recommended to be published in the journal.

COMMENTS TO AUTHORS

In this Editorial manuscript, the authors summarized the general profile of hepatogenous diabetes and provided evidences for the necessity of research on this clinical condition. The paper is logically organized and clearly presented. The publication may promote discussion and research on this clinical issue. I suggest the authors to add the definition regarding the clinical manifestation and laboratory parameters if it is possible.

COMMENTS TO AUTHORS

Diabetes mellitus that occurs as a consequence of chronic liver disease is known as hepatogenous diabetes. Patients suffering from this condition have lower frequency of risk factors of type 2 diabetes mellitus. In this article, the authors discussed the etiology, pathophysiology, and the impact of the hepatogenous diabetes. This is a mini review on the hepatogenous diabetes. The manuscript is well prepared. This review provides useful information to the clinicians. Comment 1. This manuscript is not compatible with the style of Editorial. It could be referred as a mini review. 2. The English needs polishing.
