		<input type="checkbox"/> No	

COMMENTS TO AUTHORS

The authors provide a review including the most relevant issues on HPS investigation from the pathogenesis to therapeutic intervention. The information currently available has been comprehensively summarised and discussed. In this regard, a more critical view of studies involving a very reduced number of patients might provide a more realistic vision. Although mention to these data is relevant it is also truth that there is not strong statistical evidence to support any conclusion. References must be carefully revised. The publication year is missing in some cases (65, 69, 74, 75...)

COMMENTS TO AUTHORS

To the authors: This is a well-written and useful review of hepatopulmonary syndrome. Although this topic has been revised in many other manuscripts this review written by Soulaïdopoulos adds important and comprehensive information. My only suggestion is to check carefully for spelling or grammar mistakes to make the manuscript perfectly readable.
