		<input type="checkbox"/> No records	

### COMMENTS TO AUTHORS

The case report series on the use of SBI on IBS symptoms is well written. The authors review the literature succinctly and relate it to the current case series. A few things that should be addressed are how the outcome parameters have been determined (i.e. what specific tools/questionnaires were used) and in what setting the study took place (clinic, hospital, single or multiple practice settings). Aside from that this is an interesting case report that warrants further investigation.
