

PEER-REVIEW REPORT

Name of journal: *World Journal of Clinical Cases*

Manuscript NO: 86014

Title: Successful treatment of eyebrow intradermal nevi by shearing combined with electrocautery and curettage: Two case reports

Provenance and peer review: Unsolicited manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 07564766

Position: Peer Reviewer

Academic degree: MS

Professional title: Researcher

Reviewer's Country/Territory: India

Author's Country/Territory: China

Manuscript submission date: 2023-05-30

Reviewer chosen by: Geng-Long Liu

Reviewer accepted review: 2023-06-27 07:14

Reviewer performed review: 2023-07-06 04:13

Review time: 8 Days and 20 Hours

SPECIFIC COMMENTS TO AUTHORS

1. The study addresses an important challenge faced by dermatologists in efficiently treating eyebrow intradermal nevi while minimizing the risk of recurrence and scarring.

2. The presentation of two cases of adult patients treated with shearing combined with electrocautery and curettage provides valuable clinical evidence. The absence of recurrence, as well as the lack of noticeable scars or hypopigmentation during the follow-up, suggests the efficacy and safety of this treatment approach for eyebrow intradermal nevi.

3. The conclusion highlights the superior merits of this method, including its simplicity, favorable cosmetic effects, and high patient satisfaction. These findings contribute to the growing body of knowledge in the field and emphasize the potential application of shearing combined with electrocautery and curettage for intracutaneous nevi treatment.

4. It would be beneficial if the full study provides further details regarding any potential limitations encountered during the research process. Additionally, exploring the long-term outcomes and comparing this method with alternative treatments could enhance the comprehensiveness of your study.
