Aug 15, 2020 · Objective. The Budd–Chiari Syndrome (BCS) is a rare disorder characterized by hepatic venous outflow obstruction. The primary objectives of our study were to assess temporal trends in the prevalence of BCS among hospitalized patients in the United States using the National Inpatient Sample (NIS) database and to evaluate demographics, risk factors, and common presentation of BCS.

Jan 02, 2021 · Background and objective Acute liver failure (ALF) occurs in approximately 1–2% of patients with Budd–Chiari syndrome (BCS). The primary objective of our study was to study the outcome of patients with BCS-ALF using the National Inpatient Sample (NIS) database and develop a mortality prediction model. Design We identified all adult patients with BCS, with and without ALF, ...

Aug 15, 2020 · The Budd–Chiari Syndrome (BCS) is a rare and potentially lethal disease characterized by hepatic venous outflow obstruction resulting in hepatic congestion and portal hypertension. The outflow obstruction, partial or complete, may occur in small or large hepatic veins, the suprahepatic segment of the inferior vena cava (IVC), or the right atrium.
