Primary prevention and treatment of venous thromboembolic events in patients with gastrointestinal cancers - Review

Hanno Riess, Piet Habbel, Anja Jühling, Marianne Sinn, Uwe Pelzer

Abstract

Venous thromboembolism (VTE) is a common and morbid complication in cancer patients. Patients with gastrointestinal cancers often suffer from symptomatic or incidental splanchnic vein thrombosis, impaired liver function and/or thrombocytopenia. These characteristics require a thorough risk/benefit evaluation for individual patients. Considering the risk factors for the development of venous thromboembolism and bleeding events in addition to
