At our **tertiary care** academic medical **center**, we have noticed **increasing** requirement for **advanced cannulation techniques** despite **increasing** endoscopist experience and ERCP volumes. This may relate to referral pattern, **increasing** age of patients undergoing ERCP, or a higher proportion of malignant strictures/**advanced** malignancies. We therefore formally evaluated this ...

The first and often most important step in endoscopic retrograde cholangiopancreatography (ERCP) is successful deep cannulation of the desired duct, which in most cases is the common bile duct (CBD). While it remains the first step, cannulation of the CBD can be the most challenging, even in the most experienced hands.

Aug 01, 2018 · Training in endoscopic retrograde cholangiopancreatography (ERCP) requires the development of technical, cognitive, and integrative skills well beyond those needed for standard endoscopic procedures. So far, there are limited data regarding what constitutes competency in ERCP, including achievement and maintenance.

<https://bmjopengastro.bmj.com/content/7/1/e000408>

Endoscopic ultrasound. EUS is an endoscopic imaging modality which provides a detailed and high-resolution spatial imaging of the pancreas compared with CT or MRI through the addition of an ultrasound transducer on the tip of the flexible endoscope.10 Linear EUS performs imaging in the same plane as shaft of the endoscope, whereas with radial EUS circumferential viewing can be obtained in the ...

Jan 01, 2019 · Endoscopic retrograde cholangiopancreatography (ERCP) has become the preferred technique for the management of patients with a variety of benign and malignant pancreaticobiliary disorders. Procedural success and safety depend to a large extent on proper patient selection for the appropriate indication, proceduralist skills, and an organized and ...

G&H How has **endoscopic retrograde cholangiopancreatography** evolved since its development?. RK **Endoscopic retrograde cholangiopancreatography** (ERCP) was initially developed in 1968 as a diagnostic tool. Patients would be injected with a dye and referred, as necessary, to an interventional radiologist or a surgeon for further treatment. Dr William S. ...
