Capsaicin is a topical ointment that must be applied 2-4 times per day. It is generally used as an alternate treatment choice in refractory cases, or in those who cannot tolerate first-line therapy.. Gabapentin is a second-line treatment if tricyclics are not effective. It must be taken several times per day as compared to amitriptyline.

Abstract. Eosinophilia may be seen in incontinentia pig- menti, eosinophilic pustular folliculitis, and in a minority of cases of acropustulosis of infancy and erythema toxicum neonatorum. The skin biopsy is an important tool for diagnosing many of the conditions causing blisters, pustules, and erosions.
