Allogenic banking of Dental pulp stem cells for innovative therapeutics

Pierre-Yves Collart-Dutilleul, Franck Chaubron, John De Vos, Frédéric J Cuisinier

Abstract

⁷⁵
Medical research in regenerative medicine and cell-based therapy has brought encouraging perspectives ⁵³ for the use of stem cells in clinical trials. Multiple types of stem cells, from progenitors to pluripotent stem cells, have been investigated. Among these, ⁴² dental pulp stem cells (DPSCs) are mesenchymal multipotent cells coming from the dental pulp, which is the soft tissue within teeth. They represent an interesting adult stem cell source because they are recovered in large amount in
