Hepatocellular carcinoma in Latin America: Diagnosis and treatment challenges

Piñero F *et al.* Challenges of HCC in Latin America

Federico Piñero, Jaime Poniachik, Ezequiel Ridruejo, Marcelo Silva

Abstract

Latin America, a region with a population greater than 600000000 individuals, is well known due to its wide geographic, socio-cultural and economic heterogeneity. Access to health care remains as the main barrier that challenges routine screening, early diagnosis and proper treatment of hepatocellular carcinoma (HCC). Therefore, identification of population at risk, implementation of surveillance programs and access to curative treatments has been poorly obtained in the region. Different retrospective cohort studies from the region have shown flaws in the implementation
