COMMENTS TO AUTHORS

Well structured but very common topic. Nicely written. Good language.

COMMENTS TO AUTHORS

Dear Editors: Please refer to the following comments on the submitted review article entitled "ERCP-related perforations. Diagnosis and management (Manuscript NO: 18722)". The article could be revised to make this paper more educative and I would like to recommend its "major revision" before considering its publication. The followings are the concerns: 1. The authors should provide a table to compare the differences between conservative treatment and surgery for the management of ERC-related perforations, such as indication, contraindication, advantages, disadvantages, mortality, -----.

2. The authors should provide a table to compare the differences between SEM, plastic biliary stenting, and PTBD for the non-surgical management of ERCP-related perforations. 3. The authors should concisely revise their former tables to summarize the results of the literature review. Many thanks for your invitation to review this paper. Sincerely yours,
