#### **SPECIFIC COMMENTS TO AUTHORS**

It is a very good written paper, with a specific issue highly important to urology. Mind the grammatical signs / rules; for example in first sentences of the discussion: Complete ureteral avulsion often occurs during a semirigid ureteroscopy in these consecutive processes: the operator finds it difficult to advance the ureteroscope and feels restricted in the ureter due to a relatively small ureteric lumen size; Excessive force on the ureteroscope, of which the outer caliber is gradually larger towards the base, makes it wedged into the ureter until tightly impacted; Further force results in a complete avulsion of the intramural ureter from the bladder wall; On withdrawal of the ureteroscope,

## SPECIFIC COMMENTS TO AUTHORS

The authors describe about the modified Boari flap technique for complete avulsion. It is different from other case reports in terms of follow up of the patient. However, many lackings were found: 1. grammatical errors. 2. abstract includes the sentence 4 year follow up which is not mentioned anywhere in the main text. 3. the case report should be in accordance to SCARE guidelines and must cite the guideline in the introduction section. 4. in Lab examinations, mention "other parameters were normal" or as such. Or mention the tests you have performed saying the parameters were normal. 5. The main reason why the patient underwent URS was due to calculi, please clarify this in the history if stone was removed or not. If not mention the measures you took to remove the calculi. 6. Discussion portion is poorly written, many things from beginning to end are repeating, literature searching is poor. 7. the last potion of the discussion should be briefly mentioned in the conclusion, besides the surgery and good outcome, experiences could be shared in this portion. 8. author mentions ileal substitution, auto transplantation and nephrectomy, but only describes about renal auto transplantation. question might arise why Boari flap not ileal substitution or nephrectomy was done during the operation.

### **SPECIFIC COMMENTS TO AUTHORS**

This case report is very interesting and gave author's experience in this rare but challenging conditions. The case report is well written. My only comments is that literature must be written in the unique, uniform way.

#### **SPECIFIC COMMENTS TO AUTHORS**

The abstract needed to be revised to make the information more succinct. For ordinary readers, the introduction is too brief. The case presentation needed to be adjusted as well, with fewer headers. The English language needs to be refined significantly. The format of the references is incorrect.

### **SPECIFIC COMMENTS TO AUTHORS**

The title of the article is “Extended Boari flap technique for management of complete ureteral avulsion: a case report with long-term results”. The authors report our experience of managing a complete ureteral avulsion case with long-term results. This is an interesting paper. However, some of main important issues need to be verified to improve your work as following. 1. It is hard to cross-check all the work you have done, since you didn't report line/page of each item of CARE checklist. In my opinion, the manuscript still needs to be completed according to items of CARE checklist. 2. Not to mention the previous reports of early and late surgical complications of this technique. 3. Finally, since I am not a native English user, I did not check for grammatical errors thoroughly. This should be done by an appropriate language reviewer.
