Laying open (deroofting) and curettage under local anesthesia for pilonidal disease-

An outpatient procedure

Pankaj Garg, Mahak Garg, Vikas Gupta, Sudkirkumar Mehta, ParyushLakhtaria

Abstract

AIM: To test the efficacy of lay open (deroofting, not excision) with curettage under local anesthesia (LOCULA) for pilonidal sinus as an outpatient procedure

METHODS: LOCULA procedure was done for all types of pilonidal disease. The primary outcome measure was cure rate. The secondary outcome measures were hospital stay, operating time, return to work, healing time and complication rate.

RESULTS: 33 (M/F-30/3, mean age-23.4 ± 5.8 years) consecutive patients were operated and followed for 24 months (6-46 months). Eleven were pilonidal abscess and 22 were chronic pilonidal disease. Six had recurrent disease. Operating time and the hospital stay was 22.3 ± 5.6 minutes and 63.8 ± 22.3 minutes respectively. The patients
