SPECIFIC COMMENTS TO AUTHORS

I would like to mention the following comments: 1-Introduction: The effect of refrigerator to decline of H. Pylori prevalence has been ignored. 2- Introduction: What is the difference of Socioeconomic level and socioeconomic status? 3- This article focuses only on treatment and vaccine; however, the most important method for

SPECIFIC COMMENTS TO AUTHORS

The paper "From pathogenesis to clinical management: an overview about Helicobacter pylori gastric infection" by Breno Bittencourt de Brito et al has the aim "to provide a broad overview about H. pylori infection, from pathogenesis to clinical management". The project of this review appears to be rather generic and impractical as it embraces

such a vast path that it is difficult for the reader to grasp the original information contained in the text. It would be less confusing to focus the review on some well-defined aspects of the infection and analyze them in depth in order to avoid reporting news that has already been widely known for some time. In the treatment chapter it is reported that the quadruple therapy with bismuth is indicated in the second line, while the current guidelines suggest its use in the first line. On the other hand, no mention is reported about “tailored therapy” which constitutes the real challenge for the future. In conclusion, Authors should avoid that the content of the manuscript could appear rather obvious and, in some points, devoid of ideas that stimulate reading.
