Advanced HCC and sorafenib: Diagnosis, Indications, Clinical and Radiological Follow-Up

Stefano Colagrande, Francesco Regini, Gian Giacomo Taliani, Cosimo Nardi, Andrea Lorenzo Inghilesi

Abstract

Advanced stage HCC is a category of disease defined by radiological, clinical and hepatic function parameters, comprehending a wide range of patients with different³² general conditions. The main therapeutic option is represented by sorafenib treatment, a multi-kinase inhibitor with anti-proliferative and anti-angiogenetic effect. Trans-arterial Radio Embolization also represents a promising new approach to intermediate/advanced HCC.
