**Diabetes insipidus with impaired vision caused by germinoma and perioptic meningeal seeding: A case report**

Germinoma and perioptic meningeal seeding

## Abstract

### BACKGROUND

A germinoma is a type of germ cell tumor that most frequently arises in the midline axis of the brain. Impaired vision is one clinical manifestation of germinoma. Although rare, intracranial germinoma seeding to the perioptic arachnoid space is one cause of visual acuity decrease.
