

Revision letter

Dear Editor(s),

We would like to thank the reviewers for their comments.

Reviewer 1:

This a very synthetic editorial covering an important topic in IBD. It is clear, concise and covers the most important aspects of the subject. From the beginning, the limits of the definitions and of the therapy itself are presented. The targets proposed are very ambitious when you think at the clinical evidences with anti TNF, but nevertheless it is the paradigm that should guide us. Excellent English, clear formulations and an editorial adapted form of the article.

We would like to thank the reviewer for the nice comments.

Reviewer 2:

Excellent editorial, concise, nothing to add or to cut.

We would like to thank the reviewer for the nice comments.

Regarding the editor comments:

1. Please read the core tip then provide the audio core tip.

An audio core tip has now been added.

2. Please add some references.

We have added 7 new references (18-34), highlighted with red color.

Kind regards,
