#### **SPECIFIC COMMENTS TO AUTHORS**

Fang-fang Yan et al. reported a 14-year-old girl with type A insulin resistance syndrome associated with a right ovarian serous papillary cystadenoma, hirsutism and acanthosis nigricans. Major comments 1) The description of her family history is not comprehensive. What was the serum insulin level of her father? Did not he have some manifestations of type A insulin resistance syndrome? How many siblings did she have? Blood levels of glucose and insulin for both parents and siblings should be provided. Genetic analyses should be performed in both parents. 2) Since type A insulin resistance syndrome is frequently associated with polycystic ovary syndrome (PCOS), the authors should make it clear that the pathology of the ovarian tumor is not that of PCOS. This reviewer suspects that it is. 3) Is not it ethically problematic that both ovaries were resected? Justification should be provided. Minor comments 1) English should be rewritten. There are many typos and grammatical errors.
