Unusual case of B cell lymphoma after immunosuppressive treatment for psoriasis

Lorenzo Nosotti, Andrea Baiocchi, Claudio Bonifati, Ubaldo Visco-Comandini,
Concetta Mirisola, Franca Del Nonno

Abstract

Lymphomas may be induced by the systemic immunosuppressive therapies used to treat psoriasis, such as ciclosporin, methotrexate and tumour necrosis factor (TNF)- α blockers. The biologic agents currently used in psoriasis include alefacept, efalizumab, and the tumor necrosis factor- α (TNF- α) antagonists etanercept, infliximab, and adalimumab. Infections and cancer are the main possible consequences of intended or unexpected
