SPECIFIC COMMENTS TO AUTHORS

This is a well written and brief report of a patient with an unusual location of a Bronchogenic Cyst. I would appreciate if the authors add on a subtitle about the technique and details of the surgery. It has been mentioned that a laparoscopic technique was used. What were the port placements? Any special considerations about the surgery that we should be aware of? Specific positioning of the patient, or surgeon? If there is an intra-operative view that would be a nice addition to the article. Overall, I found the manuscript easy to read and interesting, with the additions I have mentioned above it can be published.
