COMMENTS TO AUTHORS

This manuscript made a systematic summary of the benefit of adjuvant chemotherapy in gastric cancer. Also it put forwards some new ideas which needs further research, such as the potential prognostic markers. This review is not only useful for the clinician but also for the scientific researchers. However, I had a questioned that why more chemotherapy are preferred in Europe or Asia and chemoradiotherapy in the United States? I suggested that the manuscript could be accepted after minor revision.

COMMENTS TO AUTHORS

Authors indicate several themes about adjuvant chemotherapy for gastric cancer. Each theme is very interesting. However, some themes, such as Adjuvant chemotherapy: an “historical overview”, The role of adjuvant chemotherapy, Economic analysis, are rambling talk as the review. The author should change these parts more compact and brief.

COMMENTS TO AUTHORS

Very good review. I really liked reading, as part of the future challenges, the economic analysis which has added even more interest to the article. Very well written and good reference. Only pay attention to the reference page 15
