

## **INFORMED CONSENT STATEMENT**

Name of Journal: *World Journal of Psychiatry*

Manuscript NO: 35936

Manuscript Type: Clinical Practice Study

### **Repeatability of 2D Chemical Shift Imaging Multivoxel Proton Magnetic Resonance Spectroscopy for Measuring Human Cerebral Choline-Containing Compounds**

**Basant K. Puri, Mary Egan, Fintan Wallis, Philip Jakeman**

**Informed consent statement:** All subjects gave written informed consent.

Sincerely,

*B. K. Puri*

Basant K. Puri

An investigation of cerebral lipid metabolism by proton magnetic resonance spectroscopy in healthy adult men and women.

## **Subject Information Leaflet**

Thank you for volunteering to participate in this study.

### **What is an MRI scan?**

An MRI scan is a very detailed examination using a large magnet and a computer to image internal organs and tissues. Any part of the body can be scanned but this study concentrates on areas of the brain.

### **What the scan involves**

The Radiographer will ask you to fill out the questionnaire attached to this information sheet to make sure that there are no metallic bits on or in your body. You may have to have an X-ray of your eyes before the scan if you have ever worked with metal. It is very important to read this questionnaire carefully and take time to fill it out accurately. The Radiographer will explain the procedure to you. You may have to get undressed and remove all your jewellery. There will be a safe place to store your valuables. It is most important not to bring credit cards, mobile phones money and jewellery into the scan room. The Radiographer will go through all this with you prior to your scan. In the scan room you will be asked to lie on the scanning table. The scanning machine is noisy but you will be given earplugs or headphones. You can also listen to music during the scan. The scan itself takes about 30 minutes and it is most important to keep very still.

### **On arrival**

When you arrive to the hospital, go straight to the MRI Suite in the X-ray Department. Check in with the Receptionist. The Radiographer will go through the questionnaire with you. Then you may be asked to go into a cubicle to change out of your clothes (a gown will be provided), and you will put your valuables into the safe provided. You will then be shown into the scanning room and the Radiographer will explain the procedure to you and answer any of your questions. If you suffer from claustrophobia please tell the Radiographer and we will try to allay any fears you might have.

**PLEASE NOTE:** Occasionally, emergency patients are added to our scan lists, and may cause unforeseen delays to regularly scheduled appointments.

An investigation of cerebral lipid metabolism by proton magnetic resonance spectroscopy in healthy adult men and women.

**INFORMED CONSENT**

- I confirm that all of the procedures have been explained to me fully and I understand what is expected of me in this study.
- I am aware that all of my personal details will be kept confidential.
- I am aware of any risks associated with the study.
- I understand that there is no guarantee that this study will benefit me but may result in a better understanding of nutritional intake and the associated health benefits.
- I have the right to withdraw at any stage without prejudice.
- I consent to the results of this study to be used, anonymously, for report and publication.

**AGREEMENT TO CONSENT** – If you agree to participate in this research study please sign below. You will be issued with a photocopy of this form, for your own records.

I, ... (PRINT NAME) consent to participate on an anonymous basis, in the research study outlined above.
