Proposed case of mesalazine-induced cardiomyopathy in severe ulcerative colitis

Kathryn Fleming, Andrew Ashcroft, Christopher Alexakis, Demitrios Tziias, Christopher Groves, Andrew Poullis

Abstract

Five-amino salicylic acids are recommended for use in the management of inflammatory bowel disease, cardiac complications are a rare although recognised phenomenon. This report aims to highlight this serious but rare adverse reaction. We report here a case of a young man presenting with cardiogenic shock in the context of recent mesalazine treatment in severe
