SPECIFIC COMMENTS TO AUTHORS

This study aimed to analyze the expression profiles of FOXM1, COX-2, and GRP78 in BIDC and investigate their clinical implications in the disease. The study is well designed and the manuscript is well written. Minor comments: 1. The manuscript requires a language editing. Some minor language polishing should be revised. 2. A short background should be added in the abstract. 3. Images should be improved. High resolution ratio images should be provided.

Author's Response: Thank you for reviewing and recognizing our manuscript. We rechecked and revised the language of the manuscript and added background information to the abstract. In addition, we will upload all the original images as attachments.

SPECIFIC COMMENTS TO AUTHORS

I read this manuscript with interest. The authors found that FOXM1, COX-2, and GRP78 exhibit abnormally high expression in BIDC, promoting malignant tumor development and closely correlating with prognosis. The findings are discussed well, and the manuscript is well written. I recommend to accept this manuscript after a minor edting.

Author's Response: Thank you for reviewing and recognizing our manuscript, which we are very much looking forward to its official publication.
